# Introduction

The REST API on the Nuki Bridge offers simple endpoints to list all available Nuki Smartlocks, retrieve their current lock state and perform lock operations.

When using the Nuki Software Bridge, all configuration is done inside the Nuki Bridge App instead of the Nuki App.

## Calling URL

This is the address used to call the available services of the webserver.  
The IP address is shown in the bridge settings within the Nuki App.  
The server is listening for incoming requests either on default port 8080 or the configured one if it has been modified within the Nuki App.

### **Example:**

<http://192.168.0.2:8080/>

## Endpoints

### /list

Returns a list of all available Nuki Smartlocks.

#### Parameters

##### **token**

- The API token configured via the Nuki App when enabling the API

#### Response

A JSON array containing a list of all available Nuki Smartlocks is returned.  
Every element consists of a nukId and the name of the Smartlock.  
If the given API token is invalid, http error 401 is returned.

#### Example

### **Request**

Nuki Home Solutions GmbH

<http://192.168.0.2:8080/list?token=c8v7b6>

## Response

[{"nukiId": 1, "name": "Home"}, {"nukiId": 2, "name": "Grandma"}]

## /lockState

Returns the current lock state of a given Smartlock

### Parameters

#### nukiId

- The id of the Nuki Smartlock from which the lock state should be retrieved

#### token

- The API token configured via the Nuki App when enabling the API

### Response

A JSON list containing the state information for the given Nuki or http error 404 if the nukiId is not known.

If the given API token is invalid, http error 401 is returned.

Possible state values are:

- 0 uncalibrated
- 1 locked
- 2 unlocked
- 3 unlocked (lock 'n' go)
- 4 unlatched
- 5 locking
- 6 unlocking
- 7 unlatching
- 254 motor blocked
- 255 undefined

## Example

## Request

Nuki Home Solutions GmbH

Münzgrabenstraße 92/4 • 8010 Graz • Austria • contact@noki.io • T +43 316 22 84 09 • F +43 316 22 84 12 50

<http://192.168.0.2:8080/lockState?nukiId=1&token=c8v7b6>

## Response

*Locked*

{“state”: 1, “stateName”: “locked”, “batteryCritical”: false, success: “true”}

*Error retrieving state information*

{success: “false”}

## /lockAction

Performs a lock operation on the given Nuki Smartlock

### Parameters

#### nukiId

- The id of the Smartlock which should execute the lock action

#### action

- The desired lock action. Possible values are:
  - 1 unlock
  - 2 lock
  - 3 unlatch
  - 4 lock ‘n’ go
  - 5 lock ‘n’ go with unlatch

#### token

- The API token configured via the Nuki App when enabling the API

### Response

The webserver will send its response once the desired lock action has been completed or an error has occurred.

A JSON list containing a success flag or http error 404 if the nukiId is not known or http error 400 the action is undefined.

If the given API token is invalid, http error 401 is returned.

Example

**Request**

<http://192.168.0.2:8080/lockAction?nukiId=1&action=1&token=c8v7b6>

**Response**

{“success”: true, “batteryCritical”: false}
